My Bible verse card holder

Print one-sided on cardstock at 100%. The pocket has a nominal 3¾ × 2½ in face and ¼ in depth. Physical fit is untested. Test plain-paper assembly and your card stack before cardstock or lamination.

Solid line = cut **Dashed line = fold**

1. An adult cuts the solid outline. 2. With the printed side down, pre-fold every dashed line inward. The narrow strips make the depth of the pocket.

3. Fold the side strips up and their glue tabs inward. Put glue or double-sided tape on the printed glue tabs. Fold the lower panel up over the tabs and press. Leave the top open.

4. Let dry, slide in the cards, and fold the top flap over the opening. Close with removable tape. Physical assembly is untested; try plain paper first. Do not force a thick stack.
